SEMPRA 3.0 and the new Pro-Lib sound library the best SEMPRA ever

When we introduced SEMPRA a few years ago, many features were absolutely new. The fast system start - faster than any keyboard or organ. The razor-sharp color display, which is easy to read from all angles and responds reliably and quickly. The breathtakingly fast system performance. The intuitive, simple operation and especially the absolute operational reliability! And, of course, the exceptional sound quality and versatility right from the start!

With version 2.0 came the innovative GST (Guitar Strumming) technology, the SempraChord and many other musically extremely valuable functionalities. Many things were impressively new again.

Now we can present the new **SEMPRA 3.0** with the **Pro-Lib** sound library - a completely new generation of SEMPRA in terms of musical performance. Or in other words: the best SEMPRA ever!

Our latest developments turn the SEMPRA into a whole new instrument generation! And the best thing is: with this upgrade, you and your SEMPRA are part of this evolution! The SEMPRA 3.0 upgrade with the Pro-Lib Library enriches your existing SEMPRA with many new functions, a new musicality and hundreds of new sounds that outshine everything before!

This once again demonstrates the advantage of the BÖHM system: you can easily get all the benefits of the new SEMPRA 3.0 generation in your existing SEMPRA with AMADEUS Pro-D sound generation and D-MiX preamplifier via a comprehensive software upgrade. After installing all the data and activating the 3.0 operating system, you will have a fully-fledged SEMPRA 3.0 that offers all the possibilities of a comparable new instrument. You can already look forward to the many new possibilities and sounds.

Content of the SEMPRA 3.0 and Pro-Lib upgrade

The upgrade consists of the new SEMPRA 3.0 operating system with activation for the new functions, the new factory data (SONGs, styles, sound presets, if applicable arpeggios, etc.) as well as an extensive sound and sample package, the Pro-Lib sound library (Pro-Lib = Professional Library).

In addition, updates for the AMADEUS Pro-D sound modules' own operating system and for the D-MiX may need to be installed. The files required for this are currently (as of April 2024) included on the installation sticks for the 3.0 upgrade. However, later they will be also available online in the download area of the Böhm website www.boehm-organs.com.

Features of the SEMPRA 3.0 operating system:

• Extended user and firm memory: The memory areas for user and firm data per user account have been more than doubled. This means that in the long term you will have enough storage space for all your own data as well as for all current and future factory data and additional packages and apps.

ATTENTION: Data created on the SEMPRA 3.0 operating system are no longer compatible with earlier SEMPRA operating system versions! This means that you cannot load such data into SEMPRA instruments that have not yet been updated to at least SEMPRA 3.0!

New SEMPRA Creative Tools (live play functions):

- **Ensemble mode:** An extension of the solo chord: The ensemble function allows you to divide the notes into the three parts Upper 1 right...Upper 3 right (if there is no part extension, only Upper 1 right and Upper 2 right) when playing polyphonically in the upper manual. This creates realistic ensemble effects consisting of several "musicians", each playing their own part.
- **Block-Chords** for RealOrgan: A separate solo chord function is now available for the real organ: Block Chords. This allows you to play full chord sequences in the drawbar organ with just one finger – very "wunderlich".
- Extended Ritardando/Accelerando function: In addition to the familiar ritardando function (ritardando and fill in followed by a stop of the accompaniment), the ritardando/accelerando mode is also available for use while playing. You can slow down or speed up the tempo by adjustable factors. Even the speed and the number of bars over which the tempo changes take place can be set individually for each SONG preset!
- The rate (time) for the **Fade-In/-Out** function (button [**Fade**] in the area of accompanying functions) can now be set per SONG preset.
- Room ambience controls for drums and accompaniment: You can set the ambience for drums and accompaniment individually and save them in your SONG presets. Direct access during playing is also possible via slider functions.
- New firm button presets for even more comfortable live playing: new button presets are available for functions such as Ritardando, Freeze, Hawaii, Upper Part Mute etc., with which you can assign and use these functions directly on the swell pedal buttons, pistons or separate foot switches connected to your SEMPRA.

 New sound parameters in the Amadeus Sound Editor: Key-On/Off Trigger via hold (sustain) pedal: Fade individual element sounds in and out in real time using the sustain pedal. Portamento adjustable directly in the sound: The portamento effect can now also be activated directly in the sound (and of course still in the manual or pedal parts).

• Many other detailed improvements...

Pro-Lib sound library

The new Professional Library, **Pro-Lib** for short, is the tonal heart of the new SEMPRA generation. The amount of sample data in the AMADEUS Pro-D sound generator has more than doubled compared to the previous version in SEMPRA 2.0. More than 400 new sounds have been added.

The palette ranges from new **acoustic pianos** (some even with damper resonance via a new multilayer system in the sound) to new **electric pianos**, the **Elton grand**, many new **guitars**, **basses**, **saxophones**, **accordions**, **brass**, **strings** and **voices** through to completely new **synthesizer** sounds.

New sounds have been added in almost all sound categories and groups. Many of the new sounds are based on new stereo samples.

We would like to take this opportunity to thank the many outstanding musicians from the Schaumburg music scene (the area around our headquarter in Germany) who supported us during the recording sessions for the new Pro-Lib samples.

The already familiar Amadeus sounds have also been extensively optimized. Parameters have been optimized in many sounds and new, larger samples have been added. This means that even registrations with the familiar AMADEUS sounds sound much rounder, fuller and more balanced.

The drums also benefit from Pro-Lib: in the numerous new Pro-Lib drum sets, a new "Humanizer" function provides more liveliness, especially when several hits are played in succession on the same instrument. The slight variations in sound caused by the different strengths of the beats at varying points, which are mainly characterized by minimal tuning tolerances, are authentically reproduced. A total of 49 drum kits are now available with Pro-Lib.

In the appendix to this manual you will find updated sound lists, which also contain all the new Pro-Lib sounds. You can recognize these sounds in the sound tables in the display by the abbreviation "PL" in the sound name. Incidentally, the assignment of the sound buttons on the control panel has also been updated. You now have direct access to various Pro-Lib sounds.

ATTENTION: Due to the significantly increased sample memory, the current sound generation hardware from AMADEUS Pro-D and D-MiX preamplifier is a mandatory requirement for the installation of SEMPRA 3.0 and Pro-Lib. We assume in these installation and playing instructions that this up-to-date hardware is available in your instrument.

New firm registrations and styles

All factory registrations have been recreated so that you can play with the new Pro-Lib sounds and the new **Creative Tools** straight away. You will find all the songs from the previous SEMPRA 2.0 SONG list in their usual positions, but with completely new registrations. For almost every setting (whether 4 registrations for each style or 6 registrations for each song suggestion) there is now also an arpeggio (if the arpeggiator is installed on your SEMPRA). Numerous new SONG registrations have also been added. In many examples, these also provide direct access to the new playing functions of SEMPRA 3.0.

All SEMPRA factory styles have also been rearranged, partly re-recorded and adapted to the new Pro-Lib drums and sounds. So you can enjoy the new Pro-Lib soundscape directly and comprehensively while playing on your SEMPRA 3.0!

An overviews of all SONGs and Styles can also be found in the appendix to this manual.

Data compatibility

Surely you have already created numerous SONGs and presets on your SEMPRA, edited or created new styles or arpeggios, recorded Sidelines etc... The legitimate question: 'What happens to this data if I update my instrument to SEMPRA 3.0 and Pro-Lib? Can I continue to use my previous data?' Clear answer: YES!

SEMPRA 3.0 and **Pro-Lib** are fully backwards compatible with the previous **SEMPRA 2.0** version! All new Pro-Lib sounds are located in previously unused sound places. You will also find all SONGs and styles from the 2.0 GST version in the 3.0 factory data, but of course optimized for the new Pro-Lib sounds and the new functions in SEMPRA 3.0.

You can therefore continue to use your existing data without any restrictions. In many cases, they will even sound better than before, as many familiar sounds have been improved, as already mentioned.

Compatibility also applies to all additional SONG or style packages you may have purchased. You can continue to use all SEMPRA 2.0 packages including the VSP from Viva Musica in SEMPRA 3.0. Some of them will be replaced in the medium term by new, optimized versions for SEMPRA 3.0 / Pro-Lib.

Memory expansion in SEMPRA 3.0

ATTENTION: You can transfer user data from SEMPRA 2.x to SEMPRA 3.0, but not vice versa!!! SONGs, styles, arpeggios, sidelines and other data created on SEMPRA 3.0 cannot be used on a SEMPRA version 2.x!

With SEMPRA 3.0, the user and firm storage areas per user account have been extensively expanded.

This means that data in a SEMPRA 3.0 can also be written to memory areas that are not available on a SEMPRA up to version 2.x.

The memory sizes and the allocation of the firmware and user memories are displayed in the BMC menu **System setups [8] - device info** [3] menu. The values shown here apply to the user account currently called up!

Own SEMPRA 3.0 user account recommended

Despite the backward compatibility of SEMPRA 3.0 / Pro-Lib to the previous SEMPRA 2.0 version, we strongly recommend installing the SEMPRA 3.0 / Pro-Lib upgrade in a separate user account. Why?

Perhaps you have also edited factory settings such as factory SONG presets or factory styles in your previous SEMPRA 2.0 instrument and saved them to their original locations? These presets or styles are saved as user data, but in their original locations. Such user data is superimposed on the original factory data that still exists in the same positions.

If you were to install the SEMPRA 3.0 or Pro-Lib data in such an existing user account, it could happen that your existing user versions would overlay the new 3.0 factory data in the same positions. The new factory registrations or styles would therefore not be accessible at these positions - and that would be a great pity!

For this reason, we recommend setting up your own new SEMPRA 3.0 account. The process is also listed as the first step in the following installation instructions. You can continue to use your existing accounts, they will not be affected by the new data, but will still offer you the new game functions once SEMPRA 3.0 has been activated!

Previous user data in the 3.0 account

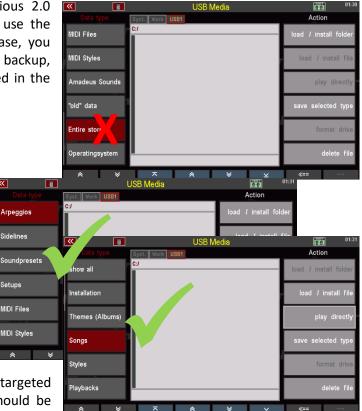

Of course, there is nothing to stop you from using your existing presets, styles etc. in the new SEMPRA 3.0 account. Here you can then considerably enhance your cherished data by successively adding the new Pro-Lib sounds and the new 3.0 functions.

We recommend the following procedure:

First save your user data in the previous 2.0 account to a USB stick. Please do <u>not</u> use the **entire store** method for this! In this case, you could only reload the complete data backup, which may cause the problems described in the previous section.

Save your data in the previous 2.0 account preferably separately according to individual data types i.e. SONGs, styles, sound presets, setups, themes/albums, playbacks, arpeggios etc. The advantage: You then have an exact overview of what is contained in the data, which banks and positions are used for the individual data types. This allows you to load individual files such as SONG banks, individual styles,

etc. into the 3.0 account in a much more targeted manner and determine exactly what should be loaded and what should not.

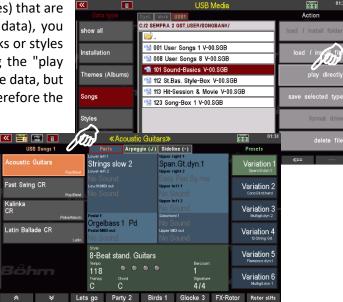

Data that was already on user positions in the 2.x account can be loaded directly into the new 3.0 account. They will then "land" on the same user positions again.

The picture shows user SONG bank 1 as an example.

However, for user data (e.g. SONGs or styles) that are stored in firm locations (changed factory data), you can use the option to load such SONG banks or styles in the 3.0 account only temporarily using the "play directly" option. You can use and try out the data, but it will not yet be saved in the organ and therefore the 3.0 account.

Shown here using the example of a user SONG bank: Via "play directly" the bank is bank is temporarily opened as a USB bank.

You then have the option, for example, of moving such SONGs individually to internal user positions using the F button function [Shift] + [F8] Edit SONG.

<u>«</u> =	USB Songs 1	Pa	«Acoustic rts Arpegg		(-)	Presi	01:3 ets
III B	- C III	Lower left	Edit or co	upper right py Song:	1		iii pn 1

		Cancel Esc	Per	2	Continue Enter		n t
-							
Ξ.	-	Transp. C	Chord C		Signature 4/4	Varia	i tion 6 ^{tigit.dyn} 1

It is even easier to move individual SONGs, a group of SONGs or even the entire USB bank to the internal user banks in the BMC menu **Presets, Songs and Albums [1] - Song management [6]**.

Individual accompaniments such as styles can be saved directly from the USB menu to user locations in the 3.0 account.

To do this, select the desired file and then select the **load/install file** function on the right.

You can select the desired internal user location in the subsequent save dialog.

« Ī 111 t. Work USB1 Action C:/...A 2 GST USER/STYLE/101 Sempra-Styles 1 V-00/ show all 101 001 8-Beat basic CR.STL Installation D 🗎 101 002 8-Beat universal CR.STL 📲 101 011 8-Beat Piano Ballad CR.S1 Themes (Album ≌ 101 017 Love Ballad 8-Beat CR.STL 🗎 101 029 60s 8-Rock n Roll CR.STL Songs 🗎 101 032 6-8 Modern Slow-Rock CR.STL 🗎 101 039 Funk-Shuffle CR.STL Styles 🗎 101 049 Dance 4 Teens CR.STL Playbacks size 146484 B Date 19.09.2022 21:20

You can use these methods to decide at your leisure whether and where in the 3.0 account you would like to position SONGs, styles etc. and then move/save these files to the desired user locations in the new 3.0 account. All firm positions in the 3.0 account with the new firm data contained therein thus remain free for now and are available to you without restriction in addition to your own data in the user positions. You can then of course start to gradually enrich your user presets, styles etc. with the new Pro-Lib sounds and functions.

For more information on saving data to USB, reloading or temporary loading via "Play directly" and the administration menus mentioned above, please refer to the **USB functions** chapter in the main SEMPRA manual.

Installation of SEMPRA 3.0 and Pro-Lib

The upgrade to SEMPRA 3.0 and Pro-Lib includes a USB stick with the new installation and firm data as well as a microSD card containing the sample data for the Pro-Lib sound library.

The microSD card is inserted directly into the AMADEUS sound system inside the SEMPRA during installation. To do this, the SEMPRA must be opened.

After inserting the microSD into the sound system, the installation program is started from the USB stick. During the installation, the new samples are installed from the microSD into the sound system. The process takes about 40 minutes, as this is a very large data package!

If the SEMPRA has several AMADEUS sound systems, the installation must then be carried out again for the additional AMADEUS module(s).

Once the samples have been installed in all existing AMADEUS modules, the SEMPRA can be closed again. The remaining installation of the 3.0 factory data is carried out directly from the USB stick.

So much for the quick run-through. Now let's get started - step by step:

Step 1: Create a new user account for SEMPRA 3.0

First, as already recommended, we create a new, empty user account for the SEMPRA 3.0 version, into which we will install the SEMPRA 3.0 and Pro-Lib data.

- The **Create a new account** input field appears on the display.
- Enter a meaningful user name for the account, e.g.
 01 SEMPRA 3.0.

Tip: By prefixing numbers, you can easily determine the order in which the accounts are later displayed on the selection screen when SEMPRA is switched on.

We have therefore chosen the name "01 SEMPRA 3.0" here.

- Confirm the entry with [Enter].
- The new account is now created and the display switches to the account selection.
- Select the new (still empty) 3.0 account and confirm with [Enter]. The account is started.

Select account / Konto wählen
01 SEMPRA 3.0
02 SEMPRA 2 GST
Übernehmen Enter

Step 2: SEMPRA firmware (BOS) update

The USB stick supplied includes the new SEMPRA 3.0 firmware (BOS file). We will now install this first:

- Insert the USB stick that you received with the 3.0 upgrade into the SEMPRA.
- The presence of a new firmware version is recognized and the display asks whether it should be installed.
- Confirm with [Enter].

- The new firmware is loaded. The display then shows the message:
- Confirm with [Enter]. A restart is not necessary at this point.

Step 3: Check and, if necessary, update the AMADEUS and D-MiX operating software

The operating systems of the AMADEUS Pro-D modules and the D-MiX preamplifier may need to be updated first so that all new functions can be implemented by the internal sound generation. The corresponding current operating system versions can also be found on the installation stick for the 3.0 upgrade.

To use all SEMPRA 3.0 and Pro-Lib functions, at least the following operating system versions must be available on the AMADEUS Pro-D modules or on the D-MiX module:

D-MiX: version 1.4 from 12.02.24 **AMADEUS Pro-D**: version 1.4 from 08.01.24

The current software versions of the installed AMADEUS modules and the D-MiX module are displayed in the BMC menu **Parts & MIDI [7] - MIDI-Slots [7]**:

The required versions are already displayed in our picture.

If your sound system(s) still have an older software version, first install the firmware update as follows:

- Insert the installation USB stick or the stick with the update data into the SEMPRA and open the USB menu using the **[USB]** button.
- Select the **operating system** file type on the left-hand side of the display.

- In the file list in the middle, you will now see the two files Pro-D.sgs (AMADEUS Pro-D operating system) and D-MiX.sgs (D-MiX operating system).
- First select the **Pro-D.sgs** file with the cursor and then tap the **load/install file** field on the right.

All modules are now ready for SEMPRA 3.0 and Pro-Lib.

Step 4: Install activations for SEMPRA 3.0 and additional apps

The actual SEMPRA 3.0 functionalities must be unlocked or activated via an app code.

From SEMPRA 3.0, the previously optional apps "4 Effects for AMADEUS" and "D-MiX Rotor" are also part of SEMPRA's standard equipment. If these apps have not already been purchased and activated in the past, they will also be activated now.

The activation codes for SEMPRA 3.0 and the corresponding apps can be found in the App Code folder on the installation stick. They are automatically recognized and read in by the system.

You only need to call up the corresponding lines in the BMC menu **System setups [8]** -**Approvals [4]** and confirm each with the F button **Accept.** This activates the corresponding functions. The activations always apply to the entire SEMPRA, i.e. to all user accounts that are operated on the instrument.

- Now activate the functions **SEMPRA 3.0** and, if necessary, **4 effects for Amadeus** and **D-MiX Rotor** (scroll down the list).
- If you then exit the menu with **[Esc]**, a message appears on the display:
- Please select **[Esc]** here now for "later...". The display returns to the BMC menu.

• Now switch off the SEMPRA for the next step.

Step 5: Installing the Pro-Lib sample data from the microSD card

Now we install the new Pro-Lib samples from the supplied microSD card into the existing AMADEUS Pro-D sound module(s). This process must be carried out separately for each built-in Amadeus sound module:

• Open the console of your SEMPRA to access the built-in AMADEUS sound modules:

SE10...SE60: Loosen the screws on the top control panel and carefully unfold the control panel until it is locked in place by the attached pull strap.

SE70...SE100: From below, loosen the large screws in the front of the wooden side panels on both sides, with which the console lid is screwed to the bottom. Then carefully open the console by pulling the lid with the control panels evenly upwards on both wooden side panels. Open the lid until it is locked in place by the attached lid holder.

Behind the keyboards, you will see one (SE10...SE60) or two (SE70-SE100) large circuit board(s), depending on the model, on which the AMADEUS sound modules are located. Depending on the model or equipment, 1 - 5 AMADEUS modules can be installed:

SE10...60 with 1 or 2 AMADEUS modules:

SE70...100 / 480SE...600SE with 3 – 5 AMADEUS modules:

The AMADEUS Pro-D sound modules have a microSD card slot on the underside. Insert the card with the sample upgrade into this slot and then start the installation from the USB stick. If <u>only one AMADEUS</u> Pro-D module is present, the card can also be inserted with the module installed.

If the AMADEUS modules are located <u>directly next to each other on</u> <u>the base board</u>, it is necessary to remove them in order to insert and eject the microSD card.

- The modules are each fixed at the back with 2 nuts, at the front they are connected to the base board via a connector strip.
- To remove a module, carefully remove the two small nuts on the rear side of the module and then carefully pull the module upwards so that it is pulled out of the plug-in strip at the front (see image on the right).

The microSD card can be easily snapped into the card slot:

 Insert the card into the card slot in the correct orientation (see picture) and press on the edge of the card until it clicks into place.

- To reinsert the module, guide it over the two small screws at the back and snap it into the plug-in strip on the base board with light pressure at the front. ATTENTION: Do not put the nuts back on yet!
- Switch on the SEMPRA and start the new SEMPRA 3.0 user account.
- Call up the USB menu (the supplied upgrade stick must be inserted).
- Tap on the **Installation** field on the left. You will now see the various installation folders for the upgrade.

ATTENTION: Depending on the configuration of your SEMPRA, the number of folders may vary. The following folders are always present. These folders are always available:

59400 Upgrade 3.0 59401 Sempra Styles I-V 59402 Basic Songs I-VI 59403 Sempra-Songs I-IV 59417 D-MiX Rotor 3.0 59447 ProLib (+SD!)

• Tap the **load/install folder** field on the right and confirm the prompt with **[Enter].**

- If the SEMPRA is only equipped with one AMADEUS module, the installation starts immediately.
- If several modules are installed, you will first be asked for which module you want to carry out the installation.
 Select the module in which the microSD card is currently located and confirm with [Enter].

- When the installation is complete, switch the SEMPRA off again and remove the module that has just been updated in order to remove the microSD card from it.
- Insert the AMADEUS module back into its slot after removing the microSD card.
- If your SEMPRA has several AMADEUS modules, repeat the above steps for all existing modules in turn.

• ATTENTION: Important note on the EXCL. DRUMS module (e.g. SEMPRA SE100): When this module is installed, there is not enough space for the inserted microSD card, as there is an RJ45 socket directly next to the installation position of this module!

Please carry out the update for this module at the position of e.g. AMADEUS module 3 (first remove the SG3 module again). Of course, you must then select SG3 again in the installation program as the group to be updated.

Once the EXCL.DRUM module has been updated in the SG3 position, move the drum module from the SG3 position back to the EXC.DRUMS position and put the original SG3 module back in its place.

- When the last module has been updated, remove the microSD card and store it. However, the card can also remain in the module.
- Make sure that all AMADEUS modules are correctly reinserted and screw them back in with the small nuts.
- Close the control panel or the top cover completely and refit the screws.

Step 6: Installing SEMPRA 3.0 update data

Next, we install the SEMPRA 3.0 update data. In this step, the Pro-Lib sound data for the new sounds, the new Pro-Lib sound presets, a setup file with the new button assignments and macros as well as the new SEMPRA 3.0 boot screen are installed.

The data installed in this step will be directly available in every new account that you create on SEMPRA. They therefore no longer need to be reinstalled each time.

- Open the USB menu, tap on Installation on the left and place the cursor on the 59400 SEMPRA 3.0 folder in the file list (do not open the folder!).
- Tap **load/install folder** on the right and confirm the security prompt with [Enter].

At the beginning of the installation, numerous system files are replaced by the new 3.0 versions, e.g. the button assignments, the sound preset banks of the factory sounds, etc. The display therefore asks several times before installation whether the existing data should be replaced.
 Confirm each of these queries with [Enter].

After the system files, the Pro-Lib sound data is installed (which then turns the already installed samples into the actual sounds):

- If only one AMADEUS sound module is present, the installation will continue directly.
- If several AMADEUS Pro D modules are available, the display asks several times during the installation of the sound data for which module you would like to install the respective files. Always select **All sound modules** to install the files for all existing modules simultaneously in one step. Confirm each time with [Enter].
- The installation of the sound files can take a few minutes in some cases.

Incidentally, a new start screen was also installed in this step, with which your "new" SEMPRA 3.0 will greet you in future when you switch it on:

3.0 Data for existing accounts

You no longer need to reinstall the files installed up to this point from the 59400 Upgrade 3.0 folder for newly created accounts.

If you want to use the new Pro-Lib sounds or the 3.0 button assignments in your existing (2.0) user accounts, you will need to install the sound presets for the new Pro-Lib sounds and the 3.0 setup file with the new button presets and macros.

- To do this, first start the account in which you want to install this data.
- Insert the 3.0 installation stick, open the USB menu with the **[USB]** button and tap on **Installation** on the left.
- Select the 59400 Upgrade 3.0 folder with the cursor and then tap [Enter] to open the folder. You can also tap the folder directly on the display to open it.
- You will now see the individual installation files in this folder. You will see the SETUP and SOUNDPRE folders, among others.
- Place the cursor on these folders one after the other (do not open them!) and tap load/install folder on the right to install the selected folder.

- Once these two folders have been installed, the Pro-Lib sounds and the 3.0 button functions will also be available in this account.
- Repeat the installation of these two folders for other of your old accounts if necessary.

Step 7: Installing the SEMPRA 3.0 factory data

In the sixth and final step, we now install the new SEMPRA 3.0 factory data, i.e. the new 3.0 SONGs with the presets, the 3.0 data for the D-MiX Rotor app with now 14 Rotor presets and some new SONGs, the 300 new 3.0 styles and - depending on the features of your SEMPRA - possibly other data such as arpeggios, updates for style packages, etc.

ATTENTION: This factory data must be installed separately in each existing or newly created user account in which it is to be used.

- Let's start with the styles: In the USB menu, select Installation on the left again and use the cursor to select the folder 59401 Sempra-Styles I-IV 3.0 in the list (do not open the folder!).
- Tap **load/install folder** on the right and confirm the following security prompt with **[Enter]**. The 300 new 3.0 styles will now be installed.

• Now install the other three upgrade folders in the same way:

59402 Basic-Songs I-V 3.0: 30 Sound-Basics and 300 Style-Basics

59403 Sempra-Songs I-IV 3.0: 256 title-related Sempra songs

59407 D-MiX Rotor 3.0: 14 Rotor presets, 3 sound basics, sound presets of the D-MiX Rotor sounds in Amadeus

 Please always confirm any queries for existing files during installation with [Enter]. The new files will then be installed over the existing version.

• Now install any other supplied update folders for additional software and apps in the usual way.

In our example image, you can see additional folders for Star Collection 3.0 or the Arpeggiator, for example. Such files may be on your stick if the corresponding apps or packages already exist and the updates were obtained with the 3.0 upgrade.

All data from the SEMPRA 3.0 upgrade has now been installed in the new 3.0 user account.

Congratulations! The SEMPRA 3.0 upgrade and the Pro-Lib sound library are now fully installed on your SEMPRA and the new data can be used.

The new Pro-Lib sounds in SEMPRA 3.0

First of all: the basic operation of SEMPRA will not change with the 3.0 upgrade. You can use all the familiar functions as usual. However, some very interesting new playing functions or creative tools have been added, which we will look at in the next section of this guide.

At first, you will probably want to discover the many new Pro-Lib sounds. So let's go on a discovery tour! In the appendix to this guide you will find the updated sound tables for SEMPRA 3.0 including Pro-Lib. You can recognize the new Pro-Lib sounds by a trailing "PL" in the sound name.

The Pro-Lib sounds occupy positions in the various AMADEUS sound banks that were previously free. For some sounds, changed sounds (but of the same character) are now stored in previously occupied slots, e.g. using new element sounds from the Pro-Lib sound pool. The PL sounds are highlighted in the sound tables in the appendix so that you can easily find them and reproduce them on the SEMPRA.

You can also quickly find the new sounds in the instrument: We have also sorted the new sounds in the selection tables (categories and groups) in the display so that the important sounds intended for playing on the manuals in particular are always in the upper table positions.

We would particularly like to recommend the following categories:

Pianos

The new grand pianos (soft, medium, hard) stand out here in particular. Thanks to new "long" samples and additional dynamic layers as well as the damper resonance (for the sounds with the abbreviation "DR" in the name), you can now play grand or upright pianos on the SEMPRA more expressively than ever before. Call up one of the "DR" pianos and just press the piano pedal: you will then hear the typical sound of the vibrating strings when the damper is lifted off the strings by pressing the pedal.

These grand piano sounds with damper resonance in particular make use of a new AMADEUS sound parameter that allows you to trigger individual element sounds via the hold (sustain) pedal. Of course, this is also very exciting for other sound variants! You can find out more about this in the new version of the AMADEUS Sound Editor manual.

And another tip: The new "Elton Piano" grand

piano sounds with a particularly brilliant, full sound are especially recommended for pop music.

E-Pianos

The new electric pianos (Rhodes, Wurlitzer, Modern and CP-70) inspire with their expressive dynamics. Just right for pop and jazz! But also try the new "effective" clavichords with wha-wah or phaser effects.

Accordions

Many new accordion sounds have been added: Whether Morino, Gold Alpin, Steirische, Schwyzerörgeli or others... We would also like to emphasize the new chord and bass registers, which allow authentic accordion trio playing on the SEMPRA with their realistic sound characteristics.

Guitars

The new Pro-Lib guitar section is very extensive. You will find many new types in all groups, some with microphones, some sampled via pickups. Extensive testing is recommended! Of course, the 3.0 styles also benefit from the new guitars. You will notice this immediately when you listen to the new styles. Together with the GST strumming technology, the accompaniment groups now sound even more realistic.

A new orchestral harp rounds off the range of plucked instruments.

Reeds

Okay, the typical "Enigma" shakuhachi is no longer really new as a character, but it still sets interesting, mystical accents in the arrangement. And thanks to the additional dynamic variation in the SEMPRA, this sound is more than just an effect sound. Here in the SEMPRA you can really play this sound and use the typical "kick" (overblowing) in a targeted way.

A highlight in Pro-Lib: the new saxophone sounds: try, for example, the "hard sax" variants with their typical rough overblowing and stronger dynamics. Or the new alto saxophones... There is a lot to discover here. Your big band arrangements will look forward to the new saxophone movements, some with swelling dynamics.

A new feature in the AMADEUS sound parameters is the option to insert the portamento, i.e. the transition from one sound to the next, directly into the sound. This means that the effect is directly available for corresponding sounds and does not have to be activated each time via the part portamento function. The portamento speed is still dependent on the setting in the part.

 Image: Control of the contro

An example of such a portamento sound is the new **Ethno-Pipe 1 PL** in the "Flutes" group.

You can find more information on the new options in the sound parameters in the new version of the AMADEUS Sound Editor manual.

Brass

The new flugelhorns and trumpets have certainly never been heard before in any other organ or keyboard. Everything is available in several variations, with or without vibrato in the sample, as a duo, with legato articulation, etc. These soloists are master class!

But the new wind instruments can also inspire in the movement. Whether soft or blaring - the brass section of SEMPRA plays in the very highest league with Pro-Lib!

Strings

Strings - probably the sound category you need most often. And that's why our sound designers have done a particularly thorough job here: Many new fantastic string samples have been added. Whether the new fast strings, the soft, round James strings or the new solo voices such as the lovely Classic Violin.

Voices

New Pro-Lib choirs and solo voices also complement this category comprehensively. The new Mmh voices provide a perfect background. And with the new Haah, Baah and Daah singers, singing voices can be accentuated excellently. The new solo voices are equally authentic both on their own and in combination with the large choir.

Synth

One of the most comprehensive categories in Pro-Lib are the synthesizers. Anyone who loves the sounds of the 80s hits, for example, will also love this Pro-Lib section. Classics like D-50, Fairlight, "fat" analog horns and many other characters invite you to rearrange the many classics of this genre with Pro-Lib.

Bass

All the music "stands" on the bass! Thanks to Pro-Lib, the many excellent bass sounds of the SEMPRA have now been joined by a series of new electric basses, which provide a rich foundation and plenty of groove both on the pedal and in the style arrangements.

Pro-Lib Drum Kits

49 new Pro-Lib drum kits bring groove to the SEMPRA rhythm section. These new kits benefit in particular from the new "**Humanizer**", which always produces small changes in sound through minimal detuning when the same drums are hit in succession - just as happens when a drummer hits the same drum several times and inevitably hits different positions on the head. This gives the drums even more of a live feel.

Listen to the **300 new SEMPRA 3.0 styles** to get a comprehensive impression of the variety of Pro-Lib drum kits.

New room ambience controls for drums and accompaniment

Be sure to try out the new room ambience controls for drums and accompaniment. You will find these controls in the SEMPRA mixer setup menu. You can use these controls to easily adjust the room ambience for the drums and the other accompaniment tracks.

📉 🧮 [i	Mixe	r-Setup			14:34
Gain 			Mixe		Preset-Submixer 	Audio-Ausgänge Bei Kopfhör Intern Front/Real Global: Verstärker	er: aus r aus
/					_	Ből	
DSP	Mixer	Setup	!Init!				

If you need a large reverb on your manual instruments, for example, you can reduce the room size for drums and reverb accordingly so that the sound remains transparent.

Or the other way round: give the drums a little more ambience for a nice reverb tail on the snare, e.g. for ballads. These controls are saved in the SONG presets. This allows you to save the desired intensity directly in each preset.

Controller functions are also available for the ambience controllers. For example, if you want to control the drum ambience directly via a controller while playing, simply place the corresponding submix on a slider or a drawbar. You can find more detailed explanations of the controller presets in the main manual for your SEMPRA.

New SONG registrations

So that you can immediately play with the new Pro-Lib sounds and experience them in complete arrangements, we have recreated all factory registrations in the various SONG categories (Sound Basics, Style Basics, Sempra Songs)!

You will find the familiar SONG names from SEMPRA 2.0 on the Firm SONG banks, but the individual SONG presets have been extensively adapted to the new sounds from Pro-Lib. Take your time and play through the various SONG banks. You will discover a lot of new things and discover a wide range of possible uses for the new sounds.

In the course of creating the new registrations, we have also further optimized the volume settings. For example, the volume of the sounds in the lower manual on the left (accompaniment) has been raised slightly compared to the 2.0 registrations, while the pedal voices have been lowered slightly. This is in response to the wishes of many customers.

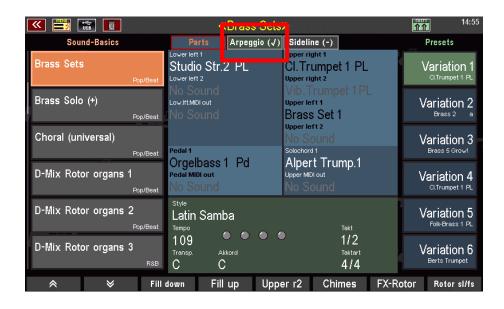

Thanks to the **preset coupler** function, however, it is easy to adapt these tunings to your own wishes.

So if, for example, you want the lower manual on the left or the pedal to be set even louder or quieter again, adjust the ratios as desired using the submix controls on the control panel and, if necessary, remove the submixers for manuals and pedal in the preset coupler from the preset management by unchecking the corresponding line.

Arpeggios in the factory registrations

Many SONG presets now also include arpeggio suggestions for the SEMPRA arpeggiator. You can recognize the presence of an arpeggio by the " check mark" in the Arpeggio tab at the top of the basic screen. The arpeggio does not have to be activated immediately, but it can be activated at any time (of course only if the Arpeggiator app is installed on your SEMPRA).

New Creative Tools in SEMPRA 3.0

The new registrations make extensive use of the familiar SEMPRA Creative Tools such as Ensemble, Ritardando/Accelerando etc., which have now been added with SEMPRA 3.0. We would now like to present these new functions to you in detail:

Ensemble

The ensemble mode available from SEMPRA 3.0 is a powerful new part of the Solochord! It allows you to divide a chord played in the upper manual into individual notes for up to 3 parts. There are several variants of how the notes are divided into parts during playing. It is therefore important to understand how this function works in principle:

As the ensemble function is a component of the solo chord, it is also basically activated via the [Solo chord] button, just like the other solo chord modes.

ACC on	ACC easy	Low, Bass	Man. Bass	Memory	Selechard	Lower
--------	----------	-----------	-----------	--------	-----------	-------

Configure Ensemble

The ensemble function only affects the first three Upper right parts in the following order

- Upper right 1
- Upper right 2
- Upper right 3

Please note: If the upper right 3 is not available on SEMPRA instruments without part extension, the ensemble function can only be used on the **Upper right 1** and **Upper right 2** parts, i.e. for a maximum of two voices.

For a solo chord function to have an effect on a part, it must always be activated for the part first! The F button **Solochord** in the Part Editor is used for this purpose.

The solo chord function must therefore first be activated on the upper right 1...3 parts if they are to play in ensemble mode.

In addition, one of the three possible ensemble functions can be set for these parts as a solo chord type ([Shift] button + F button S chord mode):

Ensemble Soli Ensemble Retrigger Ensemble Band

In contrast to the SempraChord, it is irrelevant for the ensemble function which of these 3 parts use the ensemble function! The notes played simultaneously on the upper manual are always distributed from high to low to the activated parts in the above order.

If, for example, the parts *Upper right 1*, *Upper right 2* and *Upper right 3* were set to Solochord and Ensemble, the highest note played on the upper manual would only be played on Upper right 1, the lowest note played on Upper right 3 and all notes in between would be played on Upper right 2.

However, it would also be conceivable to set only the two parts Upper right 2 and Upper right 3 to solo chord and ensemble. Upper right 1 would then continue to play as normal. The highest note played on the upper manual would then also be played on upper right 2 and all lower notes on upper right 3.

It is also important to know that **only the highest part** (i.e. the first part in the above sequence, the one for the highest note) determines the variation of the ensemble function! The following parts only have to be on any ensemble variation for them to be included in the ensemble function.

Ensemble types

Let's take a closer look at the three ensemble types:

Ensemble Soli

Here, the notes played are strictly divided into the activated parts, i.e. each instrument (i.e. each part) only plays a single note. Except for the middle activated part, which always plays **all the notes** that are virtually left over.

If keys are held and only some of them are played again, they are automatically reassigned to "their" part, so that each "voice" can play its own phrases while the others hold their notes!

Ensemble retrigger

The same way of playing as with "Ensemble Soli", except that the order of the pressed notes is reevaluated immediately when a key is released or each time the notes on the upper manual are changed and notes are struck again if necessary. This means that when a key is released, the entire chord is reevaluated and any notes that change as a result are struck again.

Ensemble Band

In this variant, the music is played according to a "score", just like in a band, where soprano and alto (first and second voice) sometimes play the same note (in unison). This means that if only one key is pressed, **all activated ensemble parts play this note**. If two keys are pressed, the first part plays the highest note, all other parts play the lower note and so on. This means that **all ensemble parts are always playing**!

Tips for the Ensemble function

To familiarize yourself with the Ensemble function, you should initially only work with two parts and accordingly only play in two voices in the upper manual.

Interesting effects can be achieved by working with three Ensemble parts and the *freeze* function:

You use three parts for the Ensemble function and also set the second part to *freeze* (and also set an F- or foot switch to this function!). If you now press the F-button, you can elegantly switch back and forth between the two instruments of the two lower parts, i.e. the "second voice" is played by a different instrument in each case.

Or you can set only the first part to freeze and switch between the two voices - the second part plays the first voice and the third part plays the second voice. If you also use different ensemble variations for the first and second part, these are also switched, as the first active(!) part determines the variation!

Instead of using the freeze function to temporarily freeze the parts, they can of course also be muted alternately using the F-button mute function or from the SONG presets.

It is also interesting and very noteworthy that both the Solochord and the SempraChord can be used **fully in parallel** with the Ensemble function!

Both when using the SempraChord and the Ensemble function, a global split of the upper manual is not useful. In this case, it may be necessary to split manually at part level by entering key zones.

The technology behind the Ensemble function

In order for a chord to be split at all, the notes pressed "simultaneously" must first be present and recognized as a chord. However, this "simultaneously" does not exist! No matter how hard you try as a player, all the keys pressed arrive in the software process one **after the other**.

So that the super-fast data processing in the SEMPRA does not start playing after the first "incoming" key, which does not necessarily have to be the highest key in the end, and double stops occur shortly afterwards, there is a certain delay in the software after each "first" key in order to "wait" for any further keys! This delay depends on the respective setting of the "Delay time for chord recognition", which you can set in the accompaniment options (press and hold the **[ACC on]** button) and which is saved in the global setup of the SEMPRA.

When playing, this means that ensemble parts always play with a (very short and acceptable) delay, but this gives you the chance to play cleanly in two voices. Depending on your playing style, the delay can also be adjusted (see above).

The basic rule when using the ensemble function is: If possible, **do NOT play excessively legato**, as the chord will be recognized again during the "smearing over" and this may result in unwanted effects - other parts than the expected ones may then play, i.e. other instruments!

Example registrations in the SEMPRA Sound Basics

So that you can get an immediate impression of the possibilities of the ensemble function, we have provided a separate SONG "Ensemble" with 6 sample presets in the Sound Basics SONG bank of SEMPRA 3.0.

BlockChords – Solochord for RealOrgan

Many virtuoso organists have always been enthusiastic about playing with a full fingering on the drawbar tones. If you love this full sound but find it difficult to play full chords, especially in faster pieces, you will find the right playing aid in the RealOrgan's BlockChord function.

Behind the BlockChords is a Solochord function for the RealOrgan. It works in a similar way to the Solochord playing modes on the other AMADEUS parts. If the function is active, the drawbar system plays full chords depending on the harmonies played on the accompaniment manual, even when playing in unison.

BlockChords is available for the upper manual and lower manual drawbar system (lower manual only <u>right</u> half of the keyboard!). You will find the BlckCrd function on the SHIFT level of the [F buttons] (hold down the [SHIFT] button) on the upper and lower pages of the drawbar menu.

Here you can switch the function on or off independently for both manuals.

For the function to be active, the **[Solochord]** button in the ACCOMPANIMENT FUNCTIONS group must also be switched on.

ACCOM	PANIMENT	FUNCTION	IS/			and l
ACC on	ACC easy	Low. Bass	Man. Bass	Memory	Solochord	Eower

As long as a chord is fingered in the accompaniment manual, the drawbar system(s) switched to BlockChord will play full chords in the harmony fingered on the accompaniment manual. If the keys on the accompaniment manual are released, the RealOrgan plays normally again.

If the block chords should continue to sound when the keys on the accompaniment manual are released, the **[Memory]** button must also be activated.

ACCOM	IPANIMENT	FUNCTION	s/			
ACC on	ACC easy	Low. Bass	Man. Bass	Memory	Conochord	Lower

Attention: If you activate the function with the [Solo chord] button, it can of course happen that the other solo chord parts suddenly play along too. This is because these are also activated when the solo chord is switched on. If these sounds are "disturbing", simply mute the relevant solo chord parts in the part editor ([F button] Mute function in the part editor).

An example of a block chord setting in the RealOrgan can be found in the SONG "Tenerife Melody" (Sempra Songs 2), here on preset 6. Klaus Wunderlich himself, who wrote the composition, would probably not have needed the function, but thanks to the block chord function we can master his virtuoso full harmonies with just one finger.

Ritardando/Accelerando

With SEMPRA 3.0, we are introducing a very versatile real-time tempo control that is only available in this form in BÖHM SEMPRA instruments.

Two alternative functions are now available for ritardando during playing via the control panel button **[Ritardando]** or alternatively via a corresponding foot switch or piston function.

Note: Of course there are actually 3 functions, the tap tempo function of the button when the accompaniment is stopped remains unaffected by the following explanations.

ACC on	ACC easy	Low. Bass	Man. Bass	Memory	Solochord	Lower
Arpeggio On	Arpeggio 1	Arpeggio 2	Arpeggio 3	Arpeggio 4		Semi Autor
	Auto Fill			Fade	(iii)	Tempo Hol
	Bridge	Break		Ritard. / Tap	Sync. Stop	Start / Stop

Ritardando + Stop

This is the standard function for the **[Ritardando]** button on the control panel: If the button is pressed while the accompaniment is playing, a fill-in is played, the tempo is slowed down at the same time and the accompaniment is stopped after the fill has finished. This function is therefore used to find a "neutral" but effective ending to a piece of music and is musically excellent for many titles - often better than the use of a style ending, which often does not really go well with the piece of music being played.

With this function, the tempo is slowed down according to a system-defined factor and curve. The parameters described in the following section for the tempo changes in the extended ritardando and accelerando function have no meaning in the standard function.

Ritardando and Accelerando

You can use this new function to slow down (ritardando) or speed up (accelerando) the tempo while the accompaniment is playing. The starting point is the tempo saved in the currently used SONG preset:

An alternative tempo (as a factor to the current tempo) can be set for each SONG preset.

If the factor is < 1, a **ritardando** occurs - the tempo is slowed down.

If the factor is > 1, an **accellerando** occurs - the tempo is accelerated.

Furthermore, the number of bars in which the tempo should run at the alternative tempo and a curve for this can be set - separately for the rise (accelerando) and fall (ritardando) of the tempo.

If the new function is activated, the tempo runs at the alternative tempo as set in the menu (e.g. as a ritardando). If the function is switched off again, the tempo returns to the standard tempo of the preset as set for the opposite function (in the example now as Accellerando). **So both settings always apply**!

The settings for the ritardando/accelerando tempo changes are made in the BMC menu **Rhythm &** Accompaniment [2] – Ritard./Accel./Fadeout [9] vor:

<u>«</u>	Rhythmus & Begleitung:	_
Begleitungs-Option	Rit./Acl./Fade (Preset)	leitungs-Verwaltung
Akkord-Manuale	Rit./AclTempo: 3/4 Ritardando Takte: 2	aoke, Liedtexte (€)
ACC-Easy Funktior	Ritardando-Kurve: log Accelerando Takte: 0	Arpeggio (€)
ACC-Instrumentieru	Accelerando-Kurve: log Fade-In/Out Rate: 21	ard./Accel./Fadeout
Halbautomat	Fade-In/Out Rate: 21 Abbrechen Übernehmen Esc Image: Second secon	öhm
		Böhm

Rit./Acl.tempo: Set the factor here, i.e. the target tempo at which the tempo should increase or decrease. A factor of 3/4, for example, means that it is slowed down to 75 % of the initial speed. 1/2 corresponds to a halving of the initial tempo, etc. Factors < 1 cause a ritardando, factors > 1 an accelerando. Ritardando bars: Here you can determine how many bars the ritardando, i.e. the slowing down of the tempo, should extend over.. Ritardando curve: Determines whether the ritardando should be linear or logarithmic. Accelerando bars: Here you can specify the number of bars over which the accelerando, i.e. the acceleration of the tempo should extend. Ritardando curve: Determines whether the ritardando should be linear or logarithmic.

Please note: The Fade In/Out Rate parameter, which is also displayed in this menu, is not one of the ritardando/accelerando parameters. This parameter is explained on page 40.

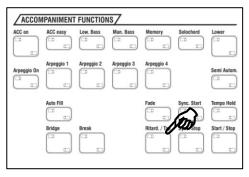

Make your settings as desired and confirm with [Enter].

All settings are saved in the SONG presets and can therefore be configured individually for each preset.

Control of the ritardando functions

The control panel button **[Ritard./Tap]** is initially assigned the **ritardando+stop** function by default..

When you press the button, the standard Fill-In function is executed with tempo delay and subsequent stop of the accompaniment.

You can also change the function of the **[Ritard./Tap]** button in the Accompaniment options menu (selectable via the BMC menu **Rhythm and Accompaniment [2] - Accompaniment options [1]**).

Please note: You can also call up the menu from the basic screen by pressing and holding the **[ACC on]** button:

ACC on	ACC easy	Low. Bass	Man. Bass	Memory	Solochord	Lower
--------	----------	-----------	-----------	--------	-----------	-------

<u>Ritardando does Fill and Stop - yes:</u> The button performs the standard function.

Ritardando does Fill and Stop - no:

The button executes the ritardando/accelerando function: Press once (switch on) = tempo is changed to the alternative tempo Press 2nd time (switch off again) = tempo changes back to the starting tempo

Use both ritardando functions in parallel on the [Ritard./Tap] button

If the **[Ritard./Tap]** button is set to the extended function (Ritardando/Accelerando) (see above) and this button is pressed together with the **[Sync-Stop]** button next to it, the standard function with Fill and Stop is triggered. Both variants can also be called up alternatively via the button.

F-button and foot switch functions for both ritardando modes

Alternatively, both ritardando functions can also be controlled via an F or foot switch function. For example, the control panel button **[Ritard./Tap]** can take over one function and a correspondingly assigned F or foot switch the other function. A footswitch is particularly practical for the ritardando/accelerando function, as tempo changes should be made while playing and you often don't have a hand free to press a button.

So that you can use the function immediately and also control it via a corresponding foot switch function, we have prepared several switch presets in the SEMPRA 3.0 factory foot switch assignments, which include the ritardando function.

aster-Preset aufruf

You can activate these button presets via the BMC menu Button and Sliders [4] - Call Button Preset [1]:

In firm preset F-12, the Ritardando/

Accelerando function is on the left swell pedal switch and also - if available - on the 1st piston switch.

F-8: - -

Taster & Regler Bitte wählen:

egler-Preset aufrufen

Of course, you can also create user button presets in which the ritardando functions are assigned. In the BMC menu **Buttons and Sliders [4] - Edit Button Preset [2]**, you will find both functions in the list of button macros:

The macro **Ritard.+Stop** corresponds to the previous function. The **Ritardando** macro triggers the new function. If this macro is defined as "**Button+**" in the macro editor, the

change to alternative tempo only takes place until the corresponding button is released again.

You can find more information on the button assignments in the main SEMPRA operating instructions.

Please note: When the accompaniment is stopped, the tap tempo function still applies to the [Ritard./Tap] button.

Examples of Ritardando/Accelerando in the 3.0 SEMPRA-SONGs

In the SEMPRA songs (title-related work registrations) you will find some examples of the Ritardando-Accelerando function. For example, in the bank "Sempra Songs 3" the SONG "An der schönen blauen Donau". This famous Strauss waltz "lives" not only from the diverse orchestral scoring but also from the numerous tempo changes.

🚾 📰 🔚	«An d. s	ch. blauen	Donau»			11	09:17

With the new ritardando/accelerando function - controlled here via the left sill

switch - you can perform these tempo changes authentically while playing. The presets in this SONG are also an impressive example of the fantastic new string sounds in the Pro-Lib sound library!

Fade-In/Out Rate

In the BMC menu **Rhythm and** Accompaniment [2] - Ritard./Accel./Fadeout [9] we find also the setting option for the Fade-In/Out rate.

	Rhythmus & Begleitung:	11:10
Begleitungs-Option	1 - 6 Rit./Acl./Fade (Preset)	leitungs-Verwaltung
Akkord-Manuale	Rit./AclTempo: 3/4 Ritardando Takte: 2	aoke, Liedtexte (€)

ACC-Instrumentieru	Accelerando-Kurve: log Fade-In/Out Rate: 21	ard./Accel./Fadeout
Halbautomat	Abbrechen Übernehmen Esc Enter	öhm
		Bőhm

You are probably already familiar with the **[Fade]** button: If the button is pressed once, the overall volume decreases continuously to zero - the SEMPRA is completely faded out. If the button is pressed again, the volume increases again.

In the menu shown above, you can set the rise and fall times for the effect over a wide range (rate). The set rate applies to both directions. The rate is saved in the SONG presets, so it can be set individually for each preset.

ACCON	IPANIMENT	FUNCTION	is7			
ACC on	ACC easy	Low. Bass	Man. Bass	Memory	Solochord	Lower
Arpeggio On	Arpeggio 1	Arpeggio 2	Arpeggio 3	Arpeggio 4		Semi Autom.
	Auto Fill			Fade	Sync. Start	Tempo Hold
	Bridge	Break		Ritard. / Tap	Sync. Stop	Start / Stop

Ritardando and Fade In/Out settings in Preset Coupler

As already shown, the settings for the ritardando/accelerando and also the function assignment to the **[Ritardando]** control panel button defined in the accompaniment options are saved in the SONG presets. The same applies to the set fade in/out rate, which is also saved in the presets.

These settings are subject to the **ACC modes** item in the preset coupler. If this item is deactivated by removing the tick, the corresponding settings are no longer loaded from the presets when the preset is called up!

New Button Presets

In the new SEMPRA 3.0 firmware, we have added several button presets and macros that make playing even more convenient with numerous functions such as freeze, Ritardando/Accelerando, Hawaii effect etc. Another new addition is a mute function for the Upper right 2 part, for example, which is available directly as a button preset and can then be called up via F-button or footswitch functions.

The new button presets can be found in the list of factory button presets if you select the BMC menu **Button and Slider [4] - Call Button Preset [1]**:

«	Taster & Regler: Bitte wählen:	09:29
Taster-Preset aufrufe	F-8:	egler-Preset aufrufen
Taster-Preset editier	F-10: Studio 1 Hawaii F-11: Studio 2 FX Rotor	gler-Preset editieren
Taster-Makro editier	F-12: Studio 3 Fill F-13: Studio 4 Ritardando	Hexdump editieren
Bóhm	F-14: Studio 5 Freeze F-15: Studio 6 Org. Rotor F-16: Studio 7 Upper R.2	lőhm
Bőhm	Abbrechen Übernehmen Esc Enter	Böhm

The function recognizable in the preset name is available in these presets on the left swell pedal switch and - if available - on the 1st piston or a 1st footswitch connected to the SEMPRA:

F-10: Studio 1 Hawaii – Triggering the Hawaii effect

F-11: Studio 2 FX-Rotor – Rotor switching for D-MiX Rotor and AMADES Rotor organs

F-12: Studio 3 Fill – Triggering a Fill-In (without variation change)

F-13: Studio 4 Ritardando – Control of the new Ritardando/Accelerando function

F-14: Studio 5 Freeze – Control of the Freeze memory function

F-15: Studio 6 Org. Rotor – Rotor switching for the RealOrgan rotor

F-16: Studio 7 Upper R.2 – Mute the Upper right 2 part

These button presets are used in numerous factory registrations. We have already shown you an example of the ritardando/accelerando above with "An der schönen blauen Donau".

The new mute function for the Upper right 2 part and Fill up/down can now be found almost universally on the F buttons in the Sempra songs (title-related factory registrations).

In some SONGs, such as "Chariots of fire", the function is also available on the sill and foot buttons via the **F-16** button preset:

Extension of the button macros list to 300 positions

The list of available positons for push-button macros has now been extended to 300! This gives you significantly more space to save your own button macros.

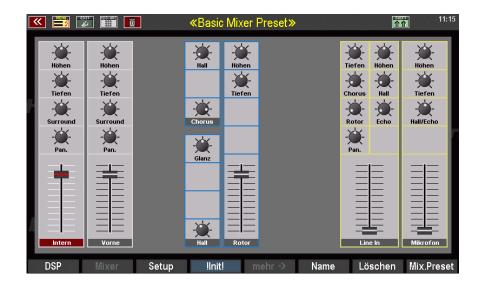

However, please keep the lower 150 positions free, as further firm macros may be stored there in future. Your own macros should therefore be stored in the free positions up to no. 150 - certainly more than enough space!

D-MiX Rotor – now included as standard in SEMPRA 3.0

With the new SEMPRA 3.0 generation, the D-MiX Rotor as an additional effect DSP in the D-MiX preamplifier is part of the standard equipment of the SEMPRA and is also used in many of the factory SONG registrations. The DSP is activated via an app code during the SEMPRA 3.0 installation - if not already available - and is then fully available.

More detailed explanations of the D-MiX Rotor and its functions can be found in the new version 3.0 of the main SEMPRA user manual, which is available for download at www.boehm-organs.com.

The number of factory Rotor DSP presets has also been increased to 14 in SEMPRA 3.0. Nine new presets have been added: F-13: Studio Rotary 1 and F-14: Studio Rotary 2

In the Sound Basics, for example, you will find 3 SONGs with 6 presets each, which offer you various D-MiX Rotor organs. These presets already give you a good impression of how versatile and sonorous this additional rotor effect can be used.

4 effect DSPs for AMADEUS - now included as standard in SEMPRA 3.0

The effects expansion to 4 DSPs per AMADEUS sound module is also part of the SEMPRA's standard equipment from SEMPRA 3.0 onwards. This allows the FX sounds that use the internal effect options of the AMADEUS Pro-D sound generation to be used even more flexibly. Each AMADEUS sound module now has 4 DSPs instead of just 2, and each DSP can provide up to 6 effects simultaneously for one sound.

The flexible options are used extensively in the factory registrations. Sounds that use the AMADEUS effects can be recognized by the abbreviation "FX" in the sound name.

The extension to 4 DSP effects - if not yet available - is activated during the SEMPRA 3.0 installation via an app code and is then fully available. Depending on the number of existing AMADEUS modules, the number of DSPs that can be used simultaneously increases:

1x AMADEUS Pro-D:	4 DSPs (3x manuals/pedal, 1x accompaniment/arpeggiator)
2x AMADEUS Pro-D:	8 DSPs (6x manuals/pedal, 2x accompaniment/arpeggiator)
3x AMADEUS Pro-D:	12 DSPs (9x manuals/pedal, 3x accompaniment/arpeggiator)
etc	

The option of displaying the assigned effect DSPs in the parts has been integrated into the SEMPRA firmware for some time now. This avoids double assignments of the DSPs.

Übernehmen Enter

- Confirm with [Enter] and return to the basic screen.
- The respective FX-DSPs (and the sound modules addressed by the parts) are now displayed as follows:

FX1-1 means e.g. first DSP on the first sound module,

FX2-1 means second DSP on the first sound module,

FX2-2 means second DSP on the second sound module, etc....

If you call up the part editor, you can also see the corresponding assignments here:

Using the displays, you can now distribute the FX sounds to be used sensibly in your SONG presets.

Further information on the AMADEUS effect DSPs can be found in the chapter "Using FX sounds" in the new 3.0 main operating instructions and in the separate operating instructions for the AMADEUS Sound Editor.
